NIKHIL GOSWAMI

FULL STACK DEVELOPER | WEB APPLICATIONS | BACKEND DEVELOPMENT

nikhil011goswami@gmail.com • github.com/nikhil011goswami-dot • linkedin.com/in/nikhil-goswami-607a82385

PROFILE

BCA student expected to graduate in 2027, developing practical web applications with an interest in full-stack development, backend APIs, computer-vision-assisted systems, and business workflows. Project work includes a Smart Parking System concept using IP cameras and a shop-management platform. Selected for a 5-day IDE Bootcamp and recognised through hackathon wins, with experience supporting event design and evaluation.

TECHNICAL SKILLS

Languages	Python, JavaScript, HTML, CSS; TypeScript (exploring)
Backend & UI	Flask, Streamlit, REST API development, IP-camera integration
Data & Storage	MySQL, JSON-based local persistence; PostgreSQL and Prisma (planned project stack)
Computer Vision / Workflow	IP-camera integration concepts, CCTV/NVR, RTSP/ONVIF; OpenCV, YOLO, ANPR/OCR planned for parking workflows
Tools & Libraries	Git, GitHub, VS Code, Pandas, Plotly, ReportLab, QR-code generation

SELECTED PROJECTS

Smart Parking System — IP Camera/CCTV-Based Parking Management

Current project • implementation details continue to be confirmed

- Developing a parking workflow using IP-camera/CCTV feeds to support vehicle entry and exit monitoring and parking operations.
- Exploring camera/NVR/RTSP stream integration, vehicle-number recognition, and parking database-to-dashboard workflows.
- Concept includes gate validation, vehicle and entry records, parking assignment, checkout, and slot-release workflows.
- OpenCV, YOLO, OCR/ANPR, Flask, SQLite, and Streamlit are candidate/planned components; only confirmed details are represented as implemented.

Suvidha — Smart Shopping & Dealer Management App

Implementation status discussed • details continue to be confirmed

- Designed around product browsing, orders, inventory, vendors, and order management.
- Explored Flask API routes for authentication, products, orders, invoices, chat, vendors, and restocking workflows.
- Explored PDF invoice generation, CSV export, stock notifications, order tracking, and map-based tracking integrations.
- Used JSON files for local persistence and worked through API connectivity and Streamlit UI-state issues.

Newsly — Multilingual News Platform

Architecture / planned project

- Planning a production-oriented multilingual news platform with scalable backend services and mobile push notifications.
- Intended stack includes NestJS, TypeScript, PostgreSQL, Prisma ORM, Redis, AWS, and Firebase Cloud Messaging.
- Technologies are planned or being explored, not represented as deployed.

ACHIEVEMENTS & BOOTCAMP

5-Day IDE Bootcamp — Selected Participant

Selected for a 5-day IDE Bootcamp. Organizer, date, and certificate details can be added when confirmed.

Hackathon Wins — Two

Reports winning two hackathons. Event names, dates, awards, and project names are not specified.

LEADERSHIP & EVENT EXPERIENCE

Webnova 2026 — UI/UX Round Organization

Supported organisation of the UI/UX design round as part of a college technology event associated with the Research and Development Cell.

EDUCATION

Bachelor of Computer Applications (BCA)

Bharatesh College of Computer Applications
Expected 2027
